Variability in cement and construction aggregates water footprint due to different production routes

Timetable

Activity	March				April				May					June				July				August				
	8	15	5 22	29	5	12	19	26	3	10	17	24	31	7	14	21	28	5	12	19	26	2	9	16	23	[
First meeting, discussion on the topic																										Г
Reading time, discussion on the project proposal																										Г
Collection of technological routes for aggregates and cement																										Г
Discussion on water use for aggregates and cement																										Г
Discussion on water use for aggregates and cement																										Τ
Exam (april 10), abstract to RILEM (april 15)																										Τ
Distinguishing variability from uncertainties																										Γ
Water figures for transport and energy																										Γ
Water consumption estimation																										Γ
Impact assessment and variability																										Γ
nterpretation of the results, conclusions																										Τ
Discussion of final report																										Τ
Exams (may 29 and 30)																										Ι
																										Τ
Final presentation																										Τ
Abstract to SETAC (june 13)																										t
																										T
